

Relief From Osteoarthritis Pain

Without Surgery

New Service Line in Radiation Oncology:
Low Dose Radiation treatment to painful joints due to Osteoarthritis

To have pain relief in a patients joints instead of having surgery.

We can now radiate a patient's joints to get them back to the quality of life they deserve.

Significant reduction in pain and improved mobility in a few months after receiving a low dose of Radiation Therapy.

Treatments occur every other day Monday thru Friday and take about 15 minutes total.

The patient can receive anywhere from 1-6 treatments.

PROCESS

Patient is referred to our office from their Orthopedic or Primary Care Physician.

We can schedule them for a consult within 5 business days of the referral. The consult takes about an hour.

After the consult the patient will be set up for a planning session in our CT scanner. This process takes about 30 minutes.

The Doctor then finalizes treatment planning process behind the scenes.

When everything is all set, we call the patient to schedule their treatment date and time.
